Born in the Alps

RFID timing for outdoor and endurance sports

IBEXORA s.r.o.

Rugged readers, compact timing systems, and practical support for trail, road, cycling, triathlon, and winter races.

3 ways to work
sales, rental, and timing

3 languages
languages in the web app

Readers + web app
outdoor-focused product line

Buy devices

Readers and antennas with software or API for organizers and timing companies with their own workflow.

Rent kits

Short-term rental with tags, antennas, software, and quick onboarding for practical race deployment.

On-site timing

End-to-end timing support with checkpoints, splits, and live operational visibility on race day.

Custom projects

Hardware and firmware adjustments for unique workflows, research setups, and special event scenarios.

Hardware highlights

- Multi-antenna UHF Gen2 (RAIN RFID) readers with high reading speed
- 12 V DC power via adapter or battery with more than 8 hours of operation
- LTE connectivity, MQTT transfer, and buffered data backup

Use cases

- Running and trail races with portable timing and long battery life
- Cycling and triathlon timing with one device handling multiple antennas
- Winter races with reliable operation down to -20 C

Compact. Practical. Reliable.

Web app, race workflow, and support in one system

IBEXORA s.r.o.

Registration, live monitoring, and multi-format export in one connected web application.

IBEXORA web application

- Create and edit races, participants, age categories, bibs, and RFID tags
- Configure checkpoints, reader assignment, and one-device multi-checkpoint use
- Monitor live results for each checkpoint during the race
- Export PDF, CSV, CAS format, raw data, and custom participant certificates
- Available in Czech, English, and German

Collaboration

- Co-develop features for a clear real-world scenario
- Better conditions for partner projects
- Priority support and faster iteration

What to expect

- Direct communication
- Practical improvements
- Support for setup and race day

Designed from real race needs

Founder-led engineering, rugged field hardware, and a web app shaped around practical event workflows rather than generic dashboards.
